FairfieldNodal and Schlumberger Multiclient Joint Venture: Phase 1 Begins Shooting in Southern Delaware Basin

Phase 1 of Coyanosa Survey in Ward, Reeves and Pecos Counties, Texas

HOUSTON, 21 August 2017—The FairfieldNodal and Schlumberger WesternGeco multiclient joint venture project in the southern Delaware Basin of West Texas, known as Coyanosa Phase I, is scheduled to begin shooting late-August.

This initial phase, to be acquired by Dawson Geophysical, will consist of 307 square miles of high-quality, 3D seismic data in Ward, Reeves and Pecos Counties, Texas. Of particular interest are the Bone Spring and Wolfcamp formations.

The resulting 3D data will tie into existing FairfieldNodal and WesternGeco 3D data to provide customers with contiguous data coverage in the southern Delaware Basin. Data will be jointly licensed by FairfieldNodal and WesternGeco. It is anticipated data from Phase 1 will be available Q1 2018.

Interested customers should contact their FairfieldNodal or WesternGeco sales representatives for more information.

About FairfieldNodal

Privately held FairfieldNodal, a global leader in seismic nodal technology, designs and manufactures a complete range of revolutionary, true cable-free ZLand® and ZMarine® systems, and offers expert marine acquisition and data processing services. Famous for its ever-improving Gulf of Mexico Shelf multi-client database, the company is also expanding licensing coverage in the revitalized Permian Basin.
