FairfieldNodal Awarded Libra Acquisition Project

SUGAR LAND, TX, 25 April 2017 – [FairfieldNodal](#) has been awarded a contract by the Libra consortium to acquire and process high-resolution 3D marine seismic. This consortium is led by Petrobras, and includes Total SA, Royal Dutch Shell Plc, China National Petroleum Corp and CNOOC.

The Libra project, to commence this summer, will be the first such project for FairfieldNodal offshore Brazil, and will utilize Z3000®, FairfieldNodal's proprietary ocean bottom nodes. The Z3000 deepwater data acquisition system is ideally suited for acquisition around the dense infrastructure and challenging pre-salt imaging conditions that make this region unique. This survey will provide the high quality 3D seismic data the operator needs to make critical decisions on the development of this field.

For more information, contact Debra Dryer at 281.275.7500, or visit [fairfieldnodal.com](#).

About FairfieldNodal

Privately held FairfieldNodal, a global leader in seismic nodal technology, designs and manufactures a complete range of revolutionary, true cable-free ZLand® and ZMarine® systems, and offers expert marine acquisition and data processing services. Famous for its ever-improving Gulf of Mexico Shelf multi-client database, the company is also expanding licensing coverage in the revitalized Permian Basin.
