FairfieldNodal's Data Acquisition Technology in High Demand

SUGAR LAND, TX, 1 March 2017 – FairfieldNodal has recently entered into an agreement to lease its proprietary Z700 technology to a large international contractor for use in the shallow waters off the coast of Indonesia.

The Z700, a safe, reliable and repeatable system, is the tool of choice for acquisition in this region, delivering the end user high quality seismic data needed for exploration and development projects.

The acquisition project is expected to last five to six months, at which time the Z700 units will be returned to FairfieldNodal to fulfill the remainder of its own data acquisition schedule.

For more information, contact Debra Dryer at 281.275.7500, or visit fairfieldnodal.com.

About FairfieldNodal

Privately held FairfieldNodal, a global leader in seismic nodal technology, designs and manufactures a complete range of revolutionary, true cable-free ZLand® and ZMarine® systems, and offers expert marine acquisition and data processing services. Famous for its ever-improving Gulf of Mexico Shelf multi-client database, the company is also expanding licensing coverage in the revitalized Permian Basin.
